About Energy | The Energy Path of the Western  
Balkans

Although the six countries are members of the European  
Energy Community, developments on the energy front in  
the Balkan region often go unnoticed, while the available  
data and statistics make it difficult to evaluate in detail the  
region's current energy paths. An analysis of the macro  
data suggests that the Western Balkans still constitute an  
energy market of limited size but with considerable  
transformation potential towards a low-carbon energy  
system.
