Hazard ratio from survival analysis. - FAQ 1226 - GraphPad

Hazard ratio from survival analysis. Last modified March 16, 2016. Definition of the hazard ratio. Hazard is defined as the slope of the survival curve a measure of how rapidly subjects are dying. The hazard ratio compares two treatments. If the hazard ratio is 2.0, then the rate of deaths in one treatment group is twice the rate in the other group. As part of the survival analysis of two
