skin cancers in experimental animals.⁶ In mice, immune suppression by UV radiation plays an important role in the pathogenesis of these skin cancers.¹² Exposure of mice to UV radiation suppresses

Immune Aspects of Sunscreens | SpringerLink

Exposing the skin to ultraviolet (UV) radiation induces many biologic alterations, including a variety of effects on the immune system (reviewed in refs. 1,2). For example, UV radiation suppresses cell-mediated immune responses and can lead to a state of long-term, antigen-specific, immune suppression.
