[What is Radio Propagation | RF Propagation | Electronics Notes](#)

This form of radio propagation is used by radio communications systems that transmit on the HF or short wave bands. Using this form of propagation, stations may be heard from the other side of the globe dependent upon many factors including the radio frequencies used, the time of day, and a variety of other factors.

The way the signal propagates and the path loss incurred provide a foundation for more complicated propagation models. Although in most cases the free space propagation model details the way in which a radio signal travels in free space, when it is not under the influence of the many other external elements that affect propagation.
