On the nonlinear limit-point/limit-circle problem ... More recent results and additional references on the limit point-limit circle problem for linear equations are given by Kauffman, Read and Zettl [10]. The study of the analogue of these properties for nonlinear equations is relatively new and not nearly as extensive as for the linear case. In fact the only references in the nonlinear case seem to be the papers of Atkinson (1), Burlak [2].

First posed by Hermann Weyl in 1910, the limit point/limit circle problem has inspired, over the last century, several new developments in the asymptotic analysis of nonlinear differential equations.

This concept was extended to second-order nonlinear equations in the late 1970's and later, to higher order nonlinear equations. This monograph traces the development of what is known as the strong nonlinear limit-point and limit-circle properties of solutions. In addition to bringing together all such results into one place, some new directions that the study has taken as well as some open
